

**FLUIDMECANICA**

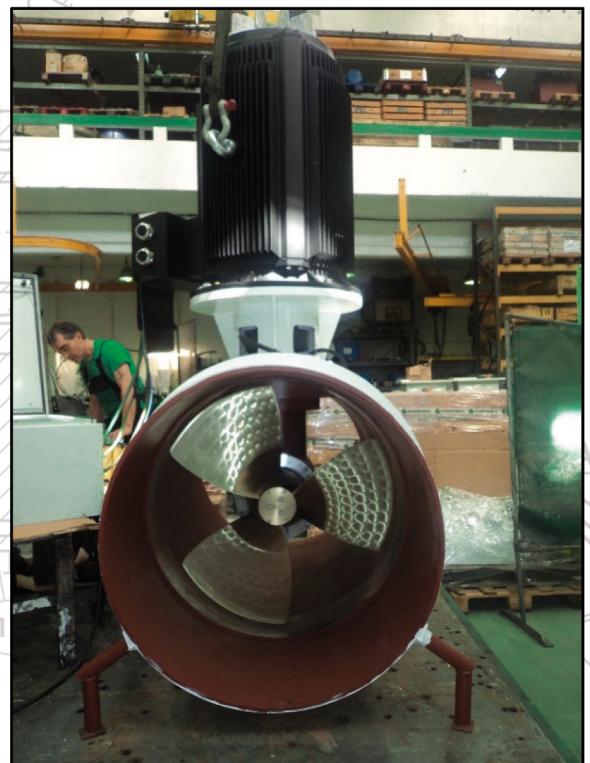

# THRUSTERS

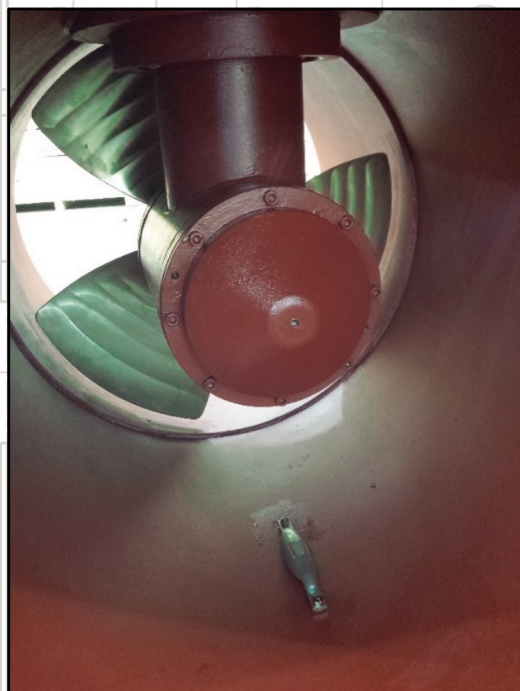

**The intended use of the thruster is to help during mooring operations and increase the steering of the vessel.**

**FLUIDMECANICA has a long experience in government systems (steering gears and bow thrusters).**

**The electric drive includes a frequency converter to achieve a 0 to 100% speed regulation. The frequency converter is adequate for the smooth regulation and fast response necessary to meet often and fast docking operations.**

## Main characteristics

**Thrust .....up to 170 kN**

**Power .....up to 1300 kW**

**Drive: electric or hydraulic**
